VINAYAK VARAL

Investment Analyst | CFA Level 2 Passed | Valuation, Financial Modeling and Quantitative Finance
Bangkok, Thailand | vinayakvaral@gmail.com | linkedin.com/in/vinayakvaral

PROFILE

Investment analyst with CFA Level 2 passed and a 3.83 GPA in Finance and Investment. I build valuation models, research and investor materials for logistics developments in Thailand. Alongside this, I build quantitative tools in Python: an options pricing package, Monte Carlo simulations and trading strategy backtests. Most interested in work where financial analysis meets quantitative methods.

EXPERIENCE

Investment Analyst, VentuNext (Thailand) Co., Ltd. **Jan 2026 to Present**
Bangkok | Industrial real estate development and advisory for logistics and warehouse assets across Thailand

- **Valuation and modeling:** build cash flow, DCF and IRR models covering construction cost, rent escalation, financing, tax and exit value, with scenario and sensitivity analysis
- **Capital raising:** prepare pitch decks and investment memos for institutional investors and listed companies; structure shareholder distribution waterfalls
- **Debt financing:** prepare financing information packages for commercial banks and respond to lenders' credit questions
- **Research:** market research on warehouse demand and supply; built supply databases and an interactive map dashboard; benchmarked project yields against listed REITs
- **Execution:** review deal models, prepare feasibility studies and development timelines, support negotiations; supervised a research intern

Business Development Intern, Kathmandu Business Consultants **Jun 2024**
Kathmandu, Nepal

- Supported business development through client and market research for the consultancy's advisory work

SELECTED PROJECTS (SELF-DIRECTED, PYTHON)

- **Options pricing package:** modular Black-Scholes-Merton pricer with Greeks, Newton-Raphson implied volatility solver and volatility surface analysis on live options chains
- **Monte Carlo forecasting model:** modular simulation of rent paths and scenario ranges driven by inflation and supply-demand inputs
- **SET trading strategies:** backtesting momentum, RSI and moving average strategies on Thai stocks against the SET index
- **Satellite land-use analysis:** Sentinel-2 pipeline computing NDVI and land-use change for the Lamphun area
- **Bank stress test model (Excel):** IRB-based credit risk weights under Baseline, Adverse and Severe scenarios
